SINCE 1968

BOSCHERT GIZELIS.co

The company

"Gizelis S.A.", founded by Stamatios Gizelis in 1968, is specializing in manufacturing sheet-metal machinery. It is currently one of the oldest companies in its field and its activities range from machine designing and development to "in-house" manufacturing of sheet-metal processing machines.

"Gizelis S.A." is a well-established manufacturing company, always present in the global market. Today the company, due to its large network of associates worldwide, can offer solutions in sheet-metal processing machinery production chain.

In 2004 "Gizelis S.A." formed a strategic alliance with "Boschert GmbH", a company located in Germany. As a result, a new series of machines has emerged aiming to provide the customer with a full range of high-quality sheet-metal processing machines.

Both 'Boschert GmbH' and 'Gizelis S.A.' operate and are located in European Union. In addition, every manufacturing process and operating procedure take place in their privately-owned premises.

The quality of human resources is of great significance for 'Gizelis S.A.' A team of highly qualified engineers and managers, fully experienced in the field of their expertise, is responsible for the company's activities, from research and development to production and marketing.

We are strongly committed to continue investing in R&D while aiming to provide high-quality products that are technologically advanced and to design new products the rapidly changing sheet-metal industry demands.

Our mission is to provide a complete range of high-quality sheet-metal processing machines to our customers through constant development and innovation.

Why Boschert Gizelis?

- Long stroke and daylight as standard even in basic models.
- Tradition & Reliability. Years of experience on bending and shearing.
- Step-by-step instructions and support on suitable tooling and machine selection.
- Direct service line and constant customer support.

Bending by Boschert - Gizelis

Press Brake Series

GTURBOBEND®

Ultra fast and productive hydraulic press brake up to 1.5m.

GFLEX®

High level press brakes up to 4-axis.
The best "value for money" choice.

GBEND®

Superior press brakes with top-class equipment and components offering the ultimate flexibility in bending process.

GHD®

Heavy-duty machines for massive loads >320tons with strong rigid frame for heavy duty applications.

Double upper and lower roller bearing for accurate and fast beam movement.

Extra external welded-steel side frame to increase machine's rigidity and minimize deformation.

Back gauge driven through ball screw and double linear guides on every axis.

Specially designed finger stops offering high accuracy and maximum flexibility even in conical bends. Maximum stop position 1200mm.

GIZELIS TURBOBEND® Series

Standard equipment

- 2D graphic controller, 8" color Touch-Screen, CybTouch8
- Y1, Y2 independent hydraulic cylinders, proportional valve technology
- Single-axis back gauge system X
- Mechanical upper tool clamping
- Mechanical lower tool clamping
- Efficient, low-noise and accurate hydraulic system
- Beam movement on two double roller bearings on each side
- Strong and stable construction
- Bending Force: 40tons
- Working Length: 1550mm
- Distance between uprights: 1550mm
- Daylight: 400mm
- Punch Stroke: 200mm
- Fast Speed: 260mm/sec
- Working Speed: 20mm/sec*
- Upstroke Speed: 200mm/sec
- Back gauge speed: 800mm/sec
- Main Electric Motor: 7.5kW
- Weight: 4.500kg
- Dimensions: 2300 x 1550 x 2500mm

SPEED
FLEXIBILITY
ACCURACY

* Working speed is limited according to safety regulations for CE countries.

Fast Mechanical Clamping ROL200, with vertical tool change (optional)

Fast Pneumatic Clamping ROL200 PN, with vertical tool change (optional)

Hydraulic Wila Clamping, with vertical tool change (optional)

X-R
X-R-Z1-Z2
X-X'-R-Z1-Z2

Standard equipment

- 2D graphic controller, 15" color Touch-Screen, CybTouch15
- Y1, Y2 independent hydraulic cylinders, proportional valve technology
- Extra welded-steel side frames
- 2-axis back gauge system, X-R
- Fast mechanical upper clamping with side tooling extraction
- CNC Crowning
- Front Supports with brushes, movable on linear guide, height adjustable
- Efficient, low-noise and accurate hydraulic system
- Beam movement on two double roller bearings on each side
- Strong and stable construction
- Throat: 400mm
- Daylight: 515mm
- Stroke: 250mm

Front Supports with brushes, movable on linear guide, height adjustable.

2-axis back gauge, X-R.

CNC Crowning.

2D graphic Controller, 15" Touch Screen, CybTouch15, including Touch Profile function and automatic bend sequence calculation.

Benefits at a glance

ROBUST Extra welded-steel side frame to increase machine's rigidity and minimize deformation.

ACCURACY & SPEED Double upper and lower roller bearing for accurate and fast beam movement.

FLEXIBILITY Heavy duty finger stops, with maximum stop position at 1200mm.

EASY OPERATING User friendly Color Touch-Screen controller, with 2D graphics.

CYBTOUCH IS PS

Easy Operating

- Large touchscreen, with vivid colors and high-contrast.
- Hand drawing TouchProfile function.
- Simple pages, clear display, large keys.
- Intuitive and user-friendly interface.
- Complete programming for efficient mass-production with multiple bends.
- Easy single bends thanks to the EasyBend page.
- Online help and interactive warning pop-up.
- Comfortable wireless software updating and data back-up using PC or Notebook.
- USB port for memory sticks.
- Large selection of languages available.

Better Bending

- Various automatic calculations of bend functions.
- Bending sequences and programs can be memorized.
- Angle, pressure and crowning management.
- Easy manual movement.

Advanced Functions

- Automatic bend sequence calculation.
- Hand drawing Touch Profil function.

Powerful

- 4 axes control (Y1-Y2-X-R).
- TouchProfile 2D graphic part creation with manual sequencing.
- Bend allowance calculation.
- Pressure – crowning calculation.
- Modulable tools for each part or bend.
- Punch depth calculation.
- Angle and back gauge correction.
- Delivered with PC-ModEva offline software.

THE PROBLEM What you design in not what you produce!

WHY? Because, the unfolding and cutting process does not take under consideration bending parameters (e.g. available tools, tools radius, etc.).

THE SOLUTION BG-soft combines the BG-soft Cut and BG-soft Bend in one unified environment. In this way every aspect of the manufacturing process (bending and cutting) is calculated, thus.

WHAT YOU DESIGN....

....IS WHAT YOU GET!!

BG-soft bend is an application for programming and simulating Boschert Gizelis press brakes, used for maximizing production resources. BG-soft bend enables offline generation of bend sequences and tooling setups, with dynamic 3D simulation for checking collisions of the part with tools, fingers and machine components.

Features

- Direct part transfer from SolidWorks, Solid Edge and Inventor
- Importing and unfolding of IGES and STEP 3D parts
- Automatic and manual tool selection based on material, machine and tool properties
- Automatic and manual bend sequencing with collision detection
- Automatic and manual fingerstop positioning with graphic control of all axes
- Automatic retraction calculation
- 3D simulation of the bending process with collision detection
- Native NC generation enables direct loading of programs to the machine control
- Comprehensive Setup Reports for the machine operator including bend sequence, tooling and bend-by-bend graphics

Advantages

- BG-soft bend enhances your productivity with:
- Faster design-to-production times with automated features
- Offline programming means minimal machine down-time
- Collision-less bend sequences mean reduced stock wastage
- BG-soft bend tool library is compatible to available tooling resulting in production-ready
- Setup Reports

3D Simulation and Collision Detection
Efficient Tool Selection
Bend Sequence Selection
Fingerstops Positioning

SETUP REPORTS

Comprehensive Setup Reports include:

- Bend sequence instructions
- Tool setup details
- Product handling
- Bend-by-bend graphics

BG-soft cut is the only system that integrates CAD/CAM capabilities in the same module:

Geometry, dimensions and technology (punching/cutting) are completely associative – when the geometry is modified, the dimensions and technology update automatically!

**FROM THE IDEA...
TO REALITY..**

AUTOMATIC NESTING

BG-soft cut offers optimal material utilization with AutoNest – cnc automatic nesting module. AutoNest is a powerful True Shape nesting tool offering versatile methods for automatic and manual nesting to achieve the best possible nesting solutions.

3D CAD INTERFACE

The CAD Link module enables one-click real-time transfer of parts from 3D CAD packages to BG-soft cut. Parts can be transferred from SolidWorks®, Solid Edge®, Autodesk® Inventor®, PTC Creo®, and Vertex® G4, using an on-line associative link, bypassing the need for intermediate files such as DXFs.

DRAFTING

BG-soft cut has a very powerful, easy to use 2D drafting module. In addition to a full set of drafting tools, BG-soft cut supports special sheet metal drafting aids and geometry validation to automatically detect and correct unclosed contours.

PUNCH TECHNOLOGY

The Punching module supports:

- Auto-Punch
- Special Tools
- Auto-Indexing
- Automatic Reposition
- Common Cuts

CUTTING TECHNOLOGY

The Cutting module supports:

- Auto-Cut
- Contour Check and Correction
- Beam Width definition and Auto Compensation
- Art Parts
- Corner Loops and Corner Slow Down
- Z axis control
- Open Contour Cutting

DATA REPORTS

Detailed production reports for individual parts, nesting solutions and costing estimation, using fully customizable templates with barcode.

Gcut[®] CNC Series

Standard equipment

- Swing beam hydraulic shear
- Heavy-duty, all-welded-steel rigid frame
- Hold-down pressure adjustment depending on cutting pressure
- Color Touch Screen 15"
- Programmed cutting length
- Close hold-downs near the squaring arm for better small-part holding & cutting
- High-speed CNC back gauge with AC servomotor
- Precision lighting on the cutting line
- Specially-made cutting blades suitable for both steel and stainless steel
- Ball casters on the table
- Finger-protection safety fence (accessible)
- Safety system on the back including side doors and photocells
- Front-sheet supports 1m each with linear scale
- 1x squaring arm 1m with linear scale
- Electric parts by Siemens, Telemecanique
- Hydraulic parts by BOSCH-REXROTH

Movable Front support (optional)

Specially-designed rectangular hold-downs, suitable for cutting narrow stripes (optional)

Color Touch Screen 15", movable along machine's length (optional)

Finger protection with light guards (optional)

** The machine is partially in the ground (special foundation required).

Gcut[®] CNC SERIES

Optional equipment

➤ RSS System: Rear Sheet Support

The RSS System is essential for cutting thin sheet-metals and wide strips because while the sheet-metal is put in the shear, due to its weight, it bends and it stops at the wrong position on the back gauge. Thus, it is mis-measured and wrongly as well as badly cut.

Applying RSS System, the sheet-metal is properly supported at the back, so it:

- does not bend
- is properly positioned on the back gauge so accurately measured and rightly cut

Position 1: Thanks to the RSS System, the sheet-metal is supported on the back gauge and does not bend.

Position 2: The RSS moves downward about 150mm, stops and takes the entire sheet-metal to be cut so that the cut stripe does not bend due to its weight and touch the floor.

Position 3: The RSS moves even further while inclining so that the sheet-metal moves out of the machine.

➤ RTF System: Return to the front

If someone would like to cut a sheet-metal the 'traditional' way, the cut (clean) piece of sheet-metal would come out at the back of the shear and fall on the floor. This way, the sheet-metal may hit other – already cut – sheet-metals or fall on the floor. Consequently, marks or scratches may be caused on the piece; no one wants this to happen, especially when it comes to manufactures of materials such as stainless steel or steel. In both cases, any mark on the surface of the piece must be avoided. While applying RTF System, the cut piece does not fall down at the back of the shear. On the contrary, it returns directly to the hands of the operator at the front!

This means:

- No mark on the surface
- No scratches
- Time-saving since the operator doesn't have to leave his place to collect the piece at the back of the machine.

**Sheet-Support-System installation required.*

➤ NSC System: Narrow Strip Cutting

The application of the innovative NSC System offers the operator the capability to cut narrow strips without being deformed.

The operator programs how many strips are needed, e.g. 4 stripes, 30mm wide each, and the system will automatically cut them, return them to the operator at the front flat with no deformation whatsoever.

**Sheet-Support-System installation required*

➤ MPF System: Movable Front Panel

A unique feature of the shears produced by Gizelis is that the front panel is movable along the machine.

Thus, the operator works while having the panel in front of him even if he cuts a sheet-metal at the other end.

➤ ATM System: Automatic Thickness Measurement

While setting the gap between the blades (clearance), the operator may mistype or set the wrong material thickness. In order to avoid this, the machine is equipped with a special sensor which automatically measures the material's thickness. The right figures appear on the panel and the clearance is set automatically.

➤ MFS System: Movable Front Supports

The two front supports can be moved manually, yet separately, along the machine so that the operator adjusts them according to the length of the metal piece.

Optional equipment

Rectangle holders with synthetic cups to cut narrow strips without being deformed.

**NSC system required.*

Front Protection with Light Guards

Brushes on table and supports

Adjustable Goniometer for angle cutting

Chute for small pieces

Transport Belts

Extended Front supports

2-axis Back Gauge, X1-X2, for angle cutting

➤ Boschert-Gizelis' combined product range covers a large variety of machines, necessary for the sheet-metal processing industry, such as press brakes, shears, punching and notching machines, combined machines, portal type oxy and plasma cutting as well as laser-cutting machines. On top of these, Boschert-Gizelis Group can manufacture specially-made machines upon request.

Bending

Robobend

Shearing

CombiLaser - Punching

Copper bar punching

Electroline - Bending

Electroline - Shearing
